

# Minutes of Meeting

**Date and Time :** 05/02/2024 - 21:00

**Topic :** Third Client meet - Explaining client regarding the progress

**Goal :** Get approval for the path we are following and Explain the extent of work we did in absence of the client. Get Clarity Regarding the project and Technology stacks.

**Attendees :** Deekshitha, Susheel Krishna, Krishna Koushik, Swaroop, Pratyush, Vedika (Client).

## Summary :

Discussion commenced with a review of the progress achieved thus far. We have developed a basic protocol app capable of generating a dataset and storing it in Health Connect storage. Our application can access data within Health Connect, which aggregates information from various health tracking apps such as Google Fit and Samsung Health. However, the client is specifically desiring to extract raw data directly from devices, seeking real-time display on the device itself.

Although the client has granted approval to proceed with the Health Connect App, as a fallback in case we encounter challenges in building a standalone app, she has emphasised the importance of pursuing the development of a user interface concurrently. Furthermore, the client suggested dividing tasks among team members, allocating responsibilities for both Machine Learning and App development. The client envisions aggregating data from diverse sources, applying pretrained ML models to derive insights. Our team is tasked with working on Google APIs to extract data from Google Fit.

## Next Meeting :

The next meeting is scheduled for 08/02/2024. During this meeting, we are expected to provide a comprehensive overview of the project's entire process, including the permissions required for data access. Additionally, we are to explore deriving data from the Aarogya Setu app and presenting the findings to the client.
